Why Convocan® Containers?

Key Benefits for the Producer

The container has been in the market for decades, making it a proven and reliable solution that continues to stand the test of time.

The ability to customize container size makes it easy to accommodate your brand goals and identity.

Enhanced packaging options like FSC®-certified paperboard & recycled content paperboard can help you meet sustainability goals.

High-quality lithographic printing and ability to print on the ring of the all-paper cover help you maximize space for high-definition graphics, which enhance your brand and product presentation.

Key Benefits for the End-Consumer

- 1 With high-quality printing, end-consumers can easily find your product on shelves and read ingredient facts.
- 2 The container has a familiar shape in the market and is easily recognizable by consumers.

Available options

Convocan® Containers

Convocan® MX Containers

*Producers could reduce the number of truckloads shipped annually by an estimated 74% by receiving the 48oz flat Convocan® container components, compared to shipping standard 48oz preformed cups.**

Sustainability starts in-plant

Make sustainable strides with the Convocan® System. Shipping flat components takes trucks off the road by allowing a higher volume per truckload. Forming containers in-plant also allows for less material handling. Both mean frozen dessert producers can reduce freight costs and save warehouse space compared to if they received preformed containers. Plus, the container's paperboard components are made of paperboard fiber from certified sources, ensuring that the fiber comes from responsible, renewable sources. We also offer FSC®-certified paperboard and recycled-content paperboard options.

*According to internal calculations, not including the lid.

The Convocan® System

Don't outsource for efficiency, take control of it.

In-plant forming is easy and efficient. With the proven technology of the Convocan® FM-1400 forming machine, create straight-wall, flat-bottom containers to fill in-line. Convocan® systems offer a unique opportunity to increase production flexibility with a more efficient supply chain* while maintaining a high-quality shelf presentation.

Efficient and intuitive, the Convocan® system gives frozen dessert producers a streamlined supply chain while providing consumers with a trusted and familiar container for their treats.

Containers that are formed in your plant allow you to have control over your production schedule and warehouse space – a win for efficiency and your brand.* The equipment assembles containers and feeds them directly to your filling line, saving warehouse space and reducing material handling. It has a small footprint and requires only one operator for up to three machines.

All our machines are designed and built in the USA by equipment engineers who understand packaging, meaning you get access to efficient technology that's easy to operate in your own space. The equipment is supported by Huhtamaki Field Service Technicians to ensure your packaging is consistently well-formed and maintains the integrity and quality of the product.

FM-1400 Forming Machine

Production Rate: 65-75 Convocan® containers/minute

Length: 92 in (2336.8 mm)

Width: 64 in (1625.6 mm)

Height: 84 in (2133.6 mm)
(with guards in operating position)
108 in (2743.2 mm)
(with guards in service position)

Conveyor Height: 38-39 in (965 – 991 mm)

Weight: 8,000 (3628.7 mm)

Electrical: 240 Volts A.C., 3-phase, 50/60 Hz, 80 amps

Pneumatic: 100 cfm at 90 psi minimum

Containers: Convocan® packaging

*Compared to preformed containers.
